INTRODUCCIÓN

El tomo II está compuesto por dos anejos:

- Anejo I: Gráficas de análisis estadístico
- Anejo II: Listados de datos de entrada y resultados.

La primera parte es el Anejo I, donde se exponen los distintos tipos de gráficas que forman parte del análisis de los test y muestreos realizados. Siempre expondremos los resultados de los tres periodos considerados: Anual, con la suma de las demandas energéticas de los doce meses del año, calefacción, con la suma de las demandas desde octubre a mayo, y refrigeración, con la suma de los cuatro meses restantes, de junio a septiembre. Para hacer más fácil la interpretación, utilizamos el color rojo para calefacción, el azul para refrigeración y el verde para el periodo anual.

En primer lugar están las gráficas del test uniparamétrico, con 417 casos por modelo. En segundo lugar exponemos las gráficas del muestreo uniforme, con 10 000 casos cada uno por modelo que han sido considerados para el estudio de la influencia de cada parámetro. En tercer lugar mostramos las gráficas del criterio de optimización seleccionado, con las curvas de regresión resultantes.

El segundo bloque es el Anejo II, con los listados de datos de entrada y resultados. Los primeros son los valores considerados en cada uno de los 16 parámetros matéricos. Los segundos son los datos mensuales de demanda energética resultante, expresada en kWh/m². El primer listado es el de los test uniparamétricos, seguido de los muestreos sensibles y uniformes.

En la tabla A1 exponemos los parámetros matéricos considerados en este plan de trabajo, indicando unidades, símbolo y rango de valores considerado.

ANEJO A.1. GRÁFICOS

Seguidamente exponemos los distintos tipos de gráficas de resultados en los tres periodos seleccionados: anual, en verde, calefacción, en rojo y refrigeración en azul, organizadas por parámetros. Son las siguientes

- Figuras 1a y 1b, test uniparamétrico y rangos sensibles
- Figuras 2. Resultados del muestreo uniforme. 10 000 casos por modelo
- Figuras 3. Boxplot del muestreo uniforme. 10 000 casos por modelo
- Figuras 4. Curvas de regresión y aplicación del criterio de optimización seleccionado, con el rango de valores que engloban el 10% de los mejores resultados (figuras 4a) y el 20% (figuras 4b), obtenidos en el muestreo uniforme.

Table with 34 columns and 860 rows of numerical data. The first column contains row indices from 3454 to 3583. Each row contains 33 numerical values, likely representing a vector or a set of coordinates. The values are mostly small integers or floats, with some larger values and occasional negative signs. The table is organized in a grid format with a header row at the top and a footer row at the bottom.

Table with 30 columns and 1000 rows of numerical data. Each row contains a sequence of numbers, likely representing a specific dataset or calculation. The numbers are arranged in a grid format, with some rows starting with a small number (e.g., 1806, 1807) and others with larger numbers (e.g., 1910, 1911).
